

2GFM GAS FLOW METER

GAS FLOW METER FOR WIRE FLAME SPRAY AND POWDER FLAME SPRAY

The 2GFM Gas Flow Meter is a highly accurate and reliable instrument for regulating and measuring the flow of both oxygen and fuel gas in a manual powder or wire combustion spray system.

The 2GFM allows the operator to easily monitor and maintain gas flow. Proper flow is crucial in order to heat and atomize wire material and help prevent overheating the equipment.

The 2GFM has precision needle valves, actuated by adjustment knobs on the front panel, that control the flow of gas. When adjusted to values found in the gun spraytables, user will achieve maximum bond strength and optimal coating quality. As an additional safety feature, each meter incorporates a check valve in the piping from the meter outlet to the combustion spray gun, which protects against high back pressure that could result from gun backfire and prevents any possibility of mixing of the process gases. It has plastic shield for safe operation.

The 2GFM supplied with percentage scale of 0-100.
